

Thinking about research opportunities, graduate school, or how best to take advantage of the scientific training at Cornell?

We'd like to bring your attention to an exciting program--Environ-mentors--that coordinates mentoring relationships between undergraduate and graduate students interested in environmental science. Specifically, the program connects junior and senior majors in Biology-EEB, Natural Resources, SES, and SNES with graduate students in the same or a related field.

WHY: Graduate students are excellent resources for information and advice on doing lab/field research, planning and preparing for graduate school, and other science-based opportunities at Cornell.

WHAT: The Enviro-mentor program will pair you with a graduate student who shares your scientific interests.

WHEN: We coordinate mentoring relationships throughout the year, so feel free to contact us anytime.

HOW: If you are interested in meeting with a graduate student, email the program coordinator (Liz Craig - ecc79@Cornell.edu).

We look forward to hearing from you!
Liz Craig (ecc79) Quinn
Thomas (rqt2) Alexis
Erwin (ace24)

The Environ-mentor program is sponsored by the Biogeochemistry and Environmental Biocomplexity Graduate Student Association, National Science Foundation IGERT program, and GPSAFC.
